

ADME/MRP2 Process: Preparing and submitting an Active Duty Medical Extension (ADME) or Medical Retention Processing (MRP2) packet

Point of Contact

Division: Personnel Division (ARNG-HRP)

Description

Active Duty Medical Extension (ADME) and Medical Retention Processing (MRP2) are programs Reserve Component Soldiers can volunteer for to be placed on temporary active duty for medical evaluation or medical treatment.

ADME applies to RC Soldiers while they are in an inactive duty for training (IDT) or non mobilized active duty status such as annual training (AT) etc. These Soldiers who incur or aggravate a service connected injury, illness, or disease may volunteer to be placed in this status.

MRP2 applies to RC Soldiers with unresolved mobilization connected medical condition(s) that either was not identified or did not reach optimal medical benefit prior to their Return From Active Duty (REFRAD). Medical condition(s) must have occurred while mobilized under 10 USC 12301 (d) and 12302 partial mobilization orders for operations in support of Overseas Contingency Operation (OCO).

Systems

Automated Orders Resources System (AORS)

[Line of Duty \(LOD\) Module](#)

The Line of Duty (LOD) Module provides a web-accessible comprehensive, user-friendly tool for use by HR Specialists regardless of location and the National Guard Bureau to administer and manage LOD determinations, incapacitation pay, medical care, and safety programs. It documents injuries that occur in the line of duty whether they are considered informal or need formal investigation depending on the details. The system provides real-time tracking of all cases from

initial draft to approval. Improved security is provided by the capability to digitally sign specified data elements using a Common Access Card (CAC).

[Medical Operational Data System \(MODS\)](#)

The Medical Operational Data System (MODS) is a Military Health Services System (MHSS) that provides the Army Medical Department (AMEDD) with an integrated automation system that supports all phases of Human Resource Life - Cycle Management in both peacetime and mobilization. This system currently maintains sixty system interfaces which are updated on a daily, weekly, monthly or semi-annual basis. These interfaces bring in over 75% of the data used in the system. The AMEDD community has a powerful tool with which decision makers and managers can affect their work requirements quickly. As a desktop resource for the personnel manager, MODS places critical assignment, training and qualification information at his fingertips. Time spent acquiring data can now be used in analyzing the information.
